New Study Shows iPhone Interest is Plunging

by Wayne Brooker on Monday 4th October

"Android is winning consumers' hearts, has now pulled neck-and-neck with Apple

When the iPhone 4 went on sale people were wildly enthusiastic after hearing about the stunning new display, inclusion of video chat, and a host of other new features at Steve Jobs' keynote introduction of the device. As the phone launched with a slew of quality issues including antenna and proximity sensor problems and began to face superior hardware Android competitors, that enthusiasm has been waning."

UK comes second in World Cyber Games

by Wayne Brooker on Monday 4th October

"The UK has finished second in the medals table at the 2010 World Cyber Games (WCG).

It took the position thanks to medal-winning performances by UK gamers in Guitar Hero 5 and Forza 3 Motorsport."

Makers of Medal of Honor do U-turn on Taliban role

by Wayne Brooker  on Monday 4th October

"Medal of Honor developers say the latest game in the series won't let people take on the role of the Taliban.

Electronic Arts has been criticised recently after it was announced the multiplayer version of its new game would let players do that.

In a statement EA's Greg Goodrich said: "We have received feedback from friends and families of fallen soldiers.

"[They] have expressed concern over the inclusion of the Taliban in the multiplayer portion of our game.""

Change to 'Bios' will make for PCs that boot in seconds

by Wayne Brooker  on Friday 1st October

"New PCs could start in just seconds, thanks to an update to one of the oldest parts of desktop computers."

The upgrade will spell the end for the 25-year-old PC start-up software known as Bios that initialises a machine so its operating system can get going.

The code was not intended to live nearly this long, and adapting it to modern PCs is one reason they take as long as they do to warm up."

Microelectronic Circuitry May Restore Healthy Brain Function

by Wayne Brooker  on Tuesday 28th September

"A microchip on a circuit board could bring axons together restoring physical and emotional abilities

Researchers are working to recover normal movement and behavior within patients who have suffered brain damage by creating microelectronic circuitry that will promote the reconnection of neurons and growth of axons."
